

DHL EDI Solutions.

Use the power of Electronic Data Interchange to integrate shipping with your business processes.

Plug shipping into your business.

DHL *EDI SOLUTIONS* give you the tools to work smarter. Highly advanced and totally customisable, they seamlessly link shipping in your business through the electronic transfer of important shipment and account information.

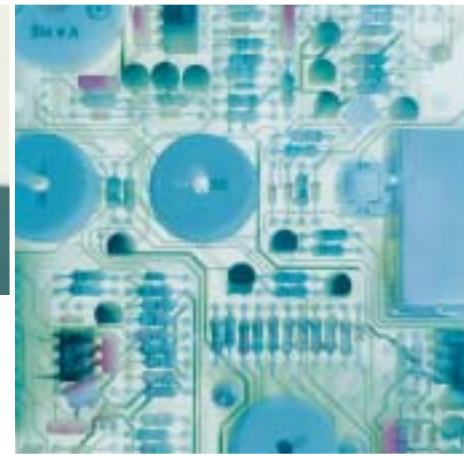

If your business sends high volumes of shipments or is looking for ways to streamline processes, DHL *EDI SOLUTIONS* can help you create a secure solution to better handle large amounts of data, giving you more control over your business.

As a result, you can increase the speed and reliability of your business processes, improve your bottom line by cutting administrative costs and, ultimately, enhance your customers' experience.

Designed to fit your existing process flows and management needs, DHL *EDI SOLUTIONS* are about doing things your way.

The quick and easy way to handle shipping.

Improving processes, productivity and control in your business.

With DHL *EDI SOLUTIONS* you can totally integrate shipping into your existing processes. You're able to import relevant shipping information directly into your systems in seconds - from shipment and delivery details to billing data.

DHL *EDI SOLUTIONS* are specifically designed to help you cope with high volumes of shipping information as well as support online billing.

- Customised to fit process flows and management needs
- Uses industry-standard protocol and multiple files format (Edifact, ANSIX12, XML, flat files)
- Secure information exchange and audit trails
- Shipment status information to import into your existing systems
- Optimised processing
- Single point of contact for global information.

How your business gains

- Fully integrated solutions
- Improve data quality – with no re-keying of data
- Increase productivity and decrease non-value added time - early data availability improves operational/business processes
- Reduce costs - less administration and paperwork
- Tighten control - secure information exchange, audit trails.

Technical requirements

- Various connection options supported through remote access environment
- Internet, dial-up (ISDN/PSTN), value-added network (VAN), X.400, X.25, etc.
- Use your own hardware and software already in place.
